Classification:	Minor <input checked="" type="checkbox"/> Major <input type="checkbox"/> Critical <input type="checkbox"/>
------------------------	--

Part Number: 012-600030-01	Title: Electronic Equipment Enclosure
-----------------------------------	--

Effectivity: Serial Number(s): 001 thru 012	Recurring Deviation/ Waiver: Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
--	---

Effect on Cost: NONE	Effect on Schedule: NONE
-----------------------------	---------------------------------

Effect on Logistics Support, Interface or Software:	NONE
--	------

Reference Documents: **STDN SPEC-4, Para. 3.6.1**

Description of Deviation / Waiver: STDN SPEC 4 States that "an elapsed time meter shall be provided for each rack grouping and shall be connected to main ac power so total system running time is indicated". The DAS system requires that power be supplied from at least 3 ac services per site to operate properly. Since the elapsed time meter will only reflect the status of power to a single service, and because all DAS status, commands, and events are logged with a time stamp that is archived, an elapsed time meter will provide no additional functionality to the DAS system.

Need for Deviation / Waiver: The elapsed time meter does not provide a suitable record of service for ac power to all DAS racks. Furthermore, automated records of all DAS functional operations are recorded via electronic means that provide both a more detailed and more accessible record of all DAS operations and events.

Corrective action taken: Elapsed Time Meters will not be installed in the DAS racks.
